Futaba Airborne and Road Pack Systems.

For the R/C hobbyist with more than one model a Futaba Airborne or Road Pack is the perfect solution.

Each Futaba Airborne or Road Pack includes a receiver, servos, battery case (dry cell) or NiCd power pack, switch harness, servo trays, hardware and servo horn assortments.

The wide range of Futaba Airborne and Road Pack Systems provide the enthusiast with a complete selection of popular component configurations for virtually every type of R/C model.

Your selection also includes the receiver crystal to match the operating frequency of your transmitter. Make sure you specify the correct frequency and respect FCC restrictions regarding your type of model.

Many new Futaba systems now offer the additional option of J-connectors (1520us) as well as standard (1310us) versions. These systems can be operated by all Futaba transmitters but the components (servos, receiver and harness) cannot be interchanged with standard mini connector systems.
