

# SH-100 Relayless Single Channel Superhet

Voltage measurements taken with Heathkit 1M-13, VTVM, 5 volt, minus D.C. scale. Common lead to plus 4.8 volts receiver battery. Receiver idling, no signal from transmitter. Note divided circles on diagram, top number is voltage measured & lower number is circuit board hole that identifies copper land where the DC probe is to be placed. Normal measurement can vary plus or minus 20% due to component tolerance.
